Universal data cables for IoT (Internet of Things)

IoT »

The Internet of Things is an umbrella term for technologies that supply physical and virtual objects with information and communications systems that enable them to work together and to network with one another.

Indoor / outdoor data cables and patch cables

- › UV-resistant
- › halogen free
- › transversely waterproof
- › splash proof *

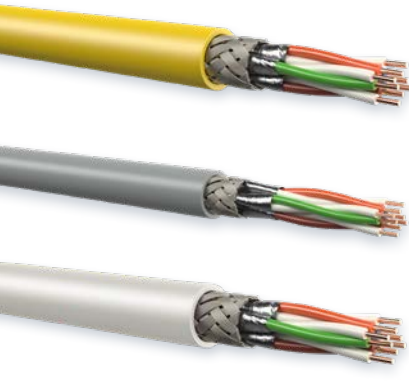

* IP 67 systems

Selected data lines were fitted with a newly developed cable sheath. This ensures reliable use in indoor and outdoor areas. The transmission performance is outstanding and is one of the best in data cables – you can trust it.
