## **Statement to Life Expectancy of cables of the Business Unit Industrial Projects**

Our cables are designed for a life expectancy of at least 30 years on the condition that the ambient / environmental conditions as e.g. ambient temperature and mechanical / chemical stress are within the specified limits for the cables.

Assumption is also that the cables will be installed professionally and that there are no harmful influences during service.

Environmental influences and/or improper handling can exert negative influence on the visual appearance of the cables and can reduce strongly the life expectancy of the cables.
