Vehicle inlet – charging interface for vehicles

Key points

- **Modular designed solution for optimal adaptation to customer requirements: Standard modules and variable extras are matched**
- **Waterproof system for individual installation on the vehicle with a specially developed water drainage**
- **High functionality concerning safety and operator convenience**
 - temperature sensing
 - inlet cover position sensing
 - indication of charging status
 - locking system
- **Locking System to secure the charging plug**
 - waterproof
 - space saving design
 - variable mounting position

LEONI is an experienced partner for the development and supply of wiring systems and related components to the automotive and commercial vehicle sector.

With the vehicle inlet LEONI provides the vehicle interface for the electrical charging of cars. It is structured as a modular designed solution to guarantee the optimal adaptation to customer requirements.
