

Fuse- and relay box with connectors for power distribution

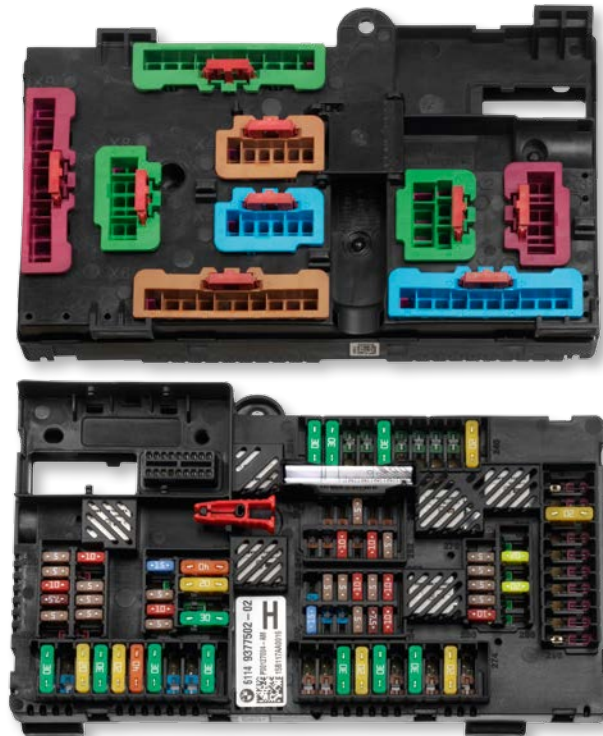

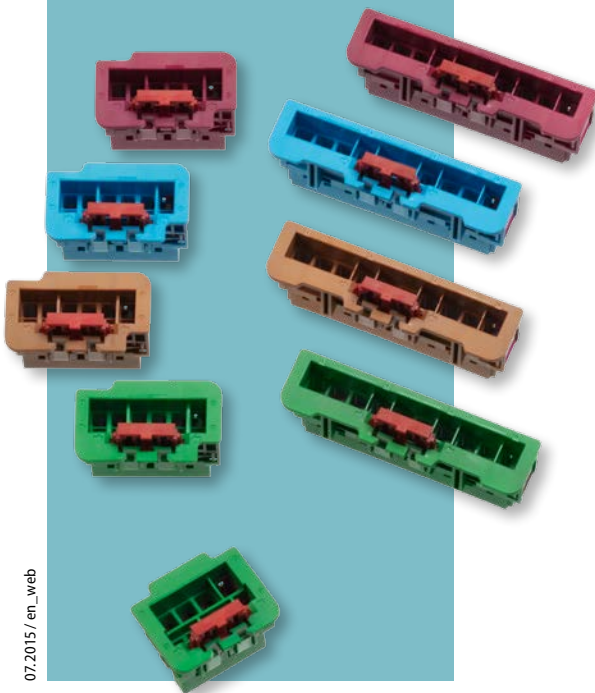

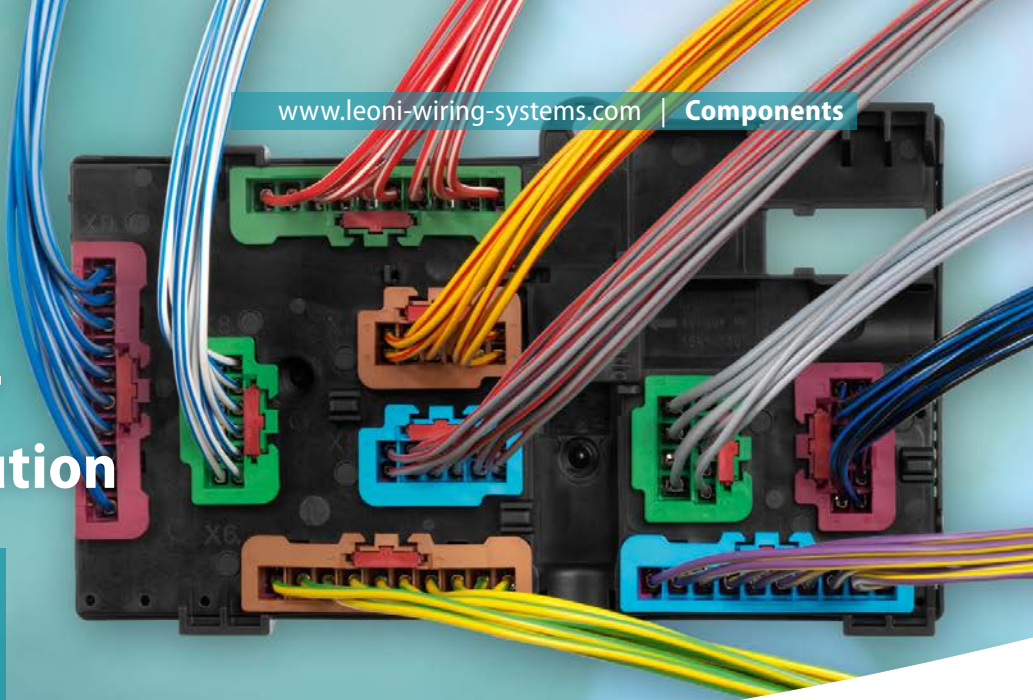

The complete solution from one source

Key points

- Development and production of the complete system
- Optimally matched interface between box and harness
- Individual solutions according to the customers' requirements

LEONI is an experienced partner for the development and supply of wiring systems and related components to the automotive and commercial vehicle sector.

We ensure product solutions which are tailored to the customer requirements. The product solutions combine a wide range of fuse and relay boxes with plug-in components that are developed specifically for the application. This guarantees an optimal interface between box and harness.
