

Splice-Connector

The alternative solution for splices in the harness

Keypoints

- Can be used in dry and humid conditions (fulfills protection class IP6K9K)
- Variable design of the contact bridges
- Standardised product with low complexity

Benefits

- Replaces splices in the wiring harness with a connector solution
- Simplifies automation of wiring harness assembly
- High variability through individual design of the contact bridges in the various housings
- Standardised solution

LEONI is an experienced partner for the development and supply of wiring systems and related components to the automotive and commercial vehicle sector.

The splice-connector replaces splice connections within the cable assembly. In conjunction with the matching HDSCS-plug, this connector solution ensures a high level of protection and simplifies installation. The splice connector is a standardised serial product, which can be customised individually according to customer requirements.

Splice-connector 16-pin
